

### **In the Specification:**

The paragraph beginning on page 14, line 6 is amended as follows:

Referring to the main folder 50, display category 55 has the title “Buy ~~and Sell~~ & Supply”.

The display categories are actually directories. Each directory has links to a set of sub-directories

52. A directory can have fields containing pointers to the various sub-directories under that

directory. For example, the “Buy ~~and Sell~~ & Supply” sub-directory 55 links to eight sub-

directories 53 52. These sub-directories have various titles that describe the contents of these

sub-directories. Selecting the sub-directory titled "e-Market~~s~~ Solution Delivery" has links to yet

another set of three sub-directories 53. In this particular illustration, by selecting one of the

entries in ~~this~~ the last set of sub-directories 54, the user has reached the lowest point of the sub-

directory hierarchy. At this point, the user can access particular slide presentations related to the

topic described in the sub-directory title. The user will be able to select and view a graphical

display. In this configuration, some sub-directories will more sub-directories than other sub-

directories. The number of directories and sub-directories will depend on the number graphical

displays for the topics under that general directory topic. The actual sets of graphical displays

will be located at the end of the sub-directory string for the particular directory.

The paragraph beginning on page 14, line 28 is amended as follows:

FIG. 7 shows the particular vertical and horizontal controls that appear on each display

that enable a user to search through and select a particular slide. As shown, there is a column of

buttons ~~60~~ 61 that correspond to the number of slide presentations in a particular sub-directory. A

row of buttons ~~61~~ 62 corresponds to the number of slides in a particular slide presentation.

Referring to FIG. 4, there would be seven buttons in the column indicating seven slide presentations in this sub-directory. For the third slide presentation, there would be 8 buttons in the row ~~61~~ 62. Each button would correspond to the particular slide in the sequence. If the user wanted to view the sixth slide 47, the user could click the sixth button and this sixth slide would appear on the display. If the user wants to view another slide on a different presentation, the user can click the button in the column for that particular presentation and then click the button in the row that corresponds to the particular slide, which the user wants to view. The buttons corresponding to the slide presentation and the specific slide will be lit to indicate to the user the actual slide that the user is viewing.
